MACHINE LEARNING PROJECTS FOR .NET DEVELOPERS

Apress Jun 2015, 2015. Taschenbuch. Book Condition: Neu. 254x178x16 mm. This item is printed on demand - Print on Demand Neuware - Software that learns from experience can improve far beyond what a single developer, or even a large team, can write into its code. This is machine learning and it's already influencing a huge range of industries, from advertising to finance, medicine and the most cutting edge scientific research. Machine Learning Projects for .NET Developers is your practical and accessible introduction to this exciting area of software development. The book emphasizes a functional style of coding that promotes bug-free, reusable code that can be easily parallelized for scalable performance. You'll code each project in the familiar setting of a C sharp application, while the machine learning logic uses F sharp, a language ideally suited to machine learning applications and the logical choice for machine learning in .NET. If you're new to F sharp, this book will give you everything you need to get started. If you're already familiar with F sharp, this is your chance to put the language into action in an exciting new context, discover new techniques, and find out how seamlessly it can integrate with your C sharp applications. In a series of fascinating projects, you'll learn how to: Build an optical character recognition (OCR) system from scratch Code a spam filter that learns by example Use F sharp's powerful type providers to interface seamlessly with external resources (in this case, useful data analysis tools from the R programming language) Clean up incomplete data and use it to make accurate predictions Build a smart recommendation engine Find patterns in data when you don't know what you're looking for Predict numerical values using regression models Accurately spot trends and anomalies Along the way, you'll have fun hacking...
