Excerpt: . the simple type all of the three elements go through the factory, without combination, direct to the product. The word combination is used here as referring to the elements from an accounting standpoint rather than a physical standpoint. In the compound type, material may go direct, while the labor and distributable overhead become combined or material and labor may be combined while distributable overhead goes direct. In the complex type, material, labor and distributable overhead become combined, while the non-distributable goes direct. These combinations may represent departments, processes, machines, or centers of production. There is no great distinction between department and process as used herein, except that more than one process may be included in one physical department. In the accompanying illustrations, where an attempt is made to bring out more clearly the subject matter of the preceding paragraphs, departments are indicated by...
